

Right tree. Right place.

Your tree may be small now, but it could be towering above you in a few years. Therefore, it's essential to consider the location of overhead and underground power lines before you plant your tree and know how tall your tree will be at peak maturity.

LOW TREE ZONE

Avoid planting within 20 ft. of power lines. If planting is unavoidable, only plant shrubs and small trees that reach a mature height of 15 ft. or less.

MEDIUM TREE ZONE

Plant medium trees (under 40 ft. when mature) at least 25 ft. away from power lines.

Learn more about your specific trees by visiting the Indiana DNR website.

Open your phone's camera and point at this QR code.

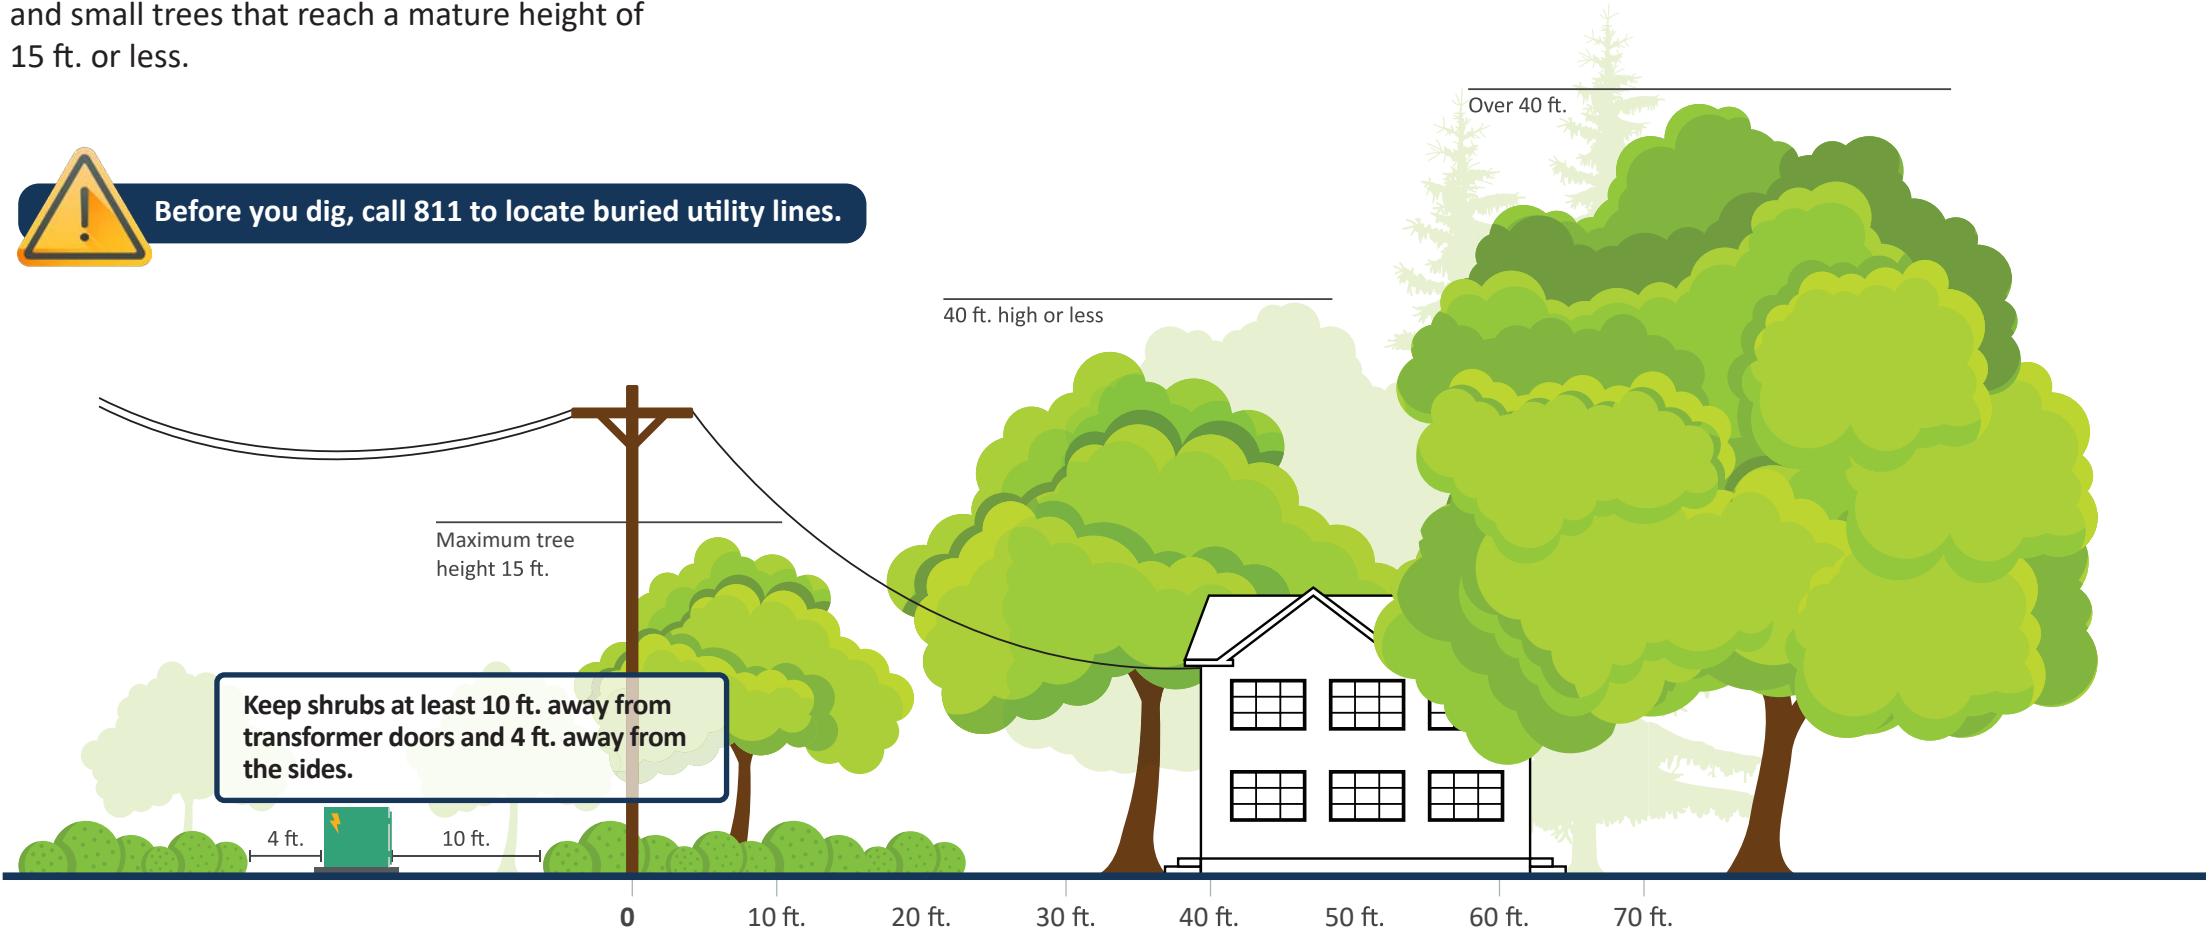

LARGE TREE ZONE

Plant large trees (over 40 ft. when mature) at least 50 ft. away from power lines.

Before you dig, call 811 to locate buried utility lines.

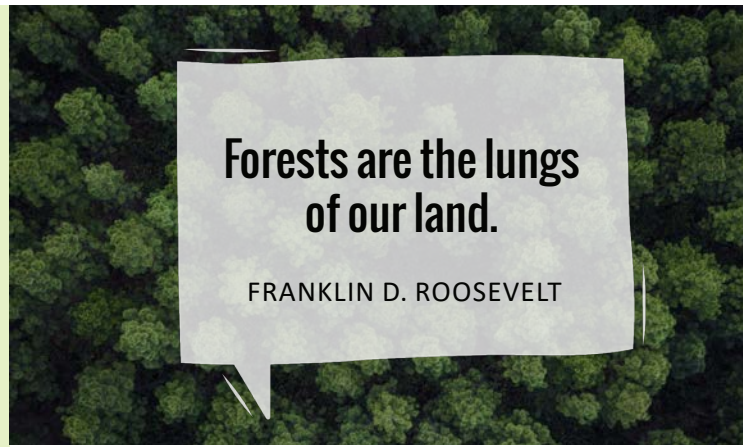

**Know what's below.
811 before you dig.**

Before planting your new trees, please contact Indiana 811 online or by calling 811 to have your utilities marked.

What do the colors mean when my utilities are marked?

-  Electric
-  Communications
-  Gas/Oil/Steam
-  Sewer
-  Water
-  Reclaimed Water
-  Temporary Service Markings
-  Proposed Construction

**Forests are the lungs
of our land.**

FRANKLIN D. ROOSEVELT

— THANK YOU —

These trees are distributed with permission by the

**Indiana Department of Natural Resources
Division of Forestry's Nursing Program**

Our Mission is to grow and distribute to Indiana landowners high-quality plant materials for conservation plantings. Conservation plantings include plantings for timber, windbreaks, wildlife food and habitat, watershed and soil protection, reclamation, and education.
